

**A PhD and a post doc position in marine ecology on the EU project Polar Ocean Mitigation Potential (POMP) is available in Tromsø at UiT-The Arctic University of Norway
Application deadline 7 February 2024.**

The successful applicants will work together with an international team to improve our understanding of carbon uptake, transfer, export and sequestration in Polar marine systems. Common for both positions is that they will establish and utilize trait-based approaches to address these questions from a functional biodiversity perspective. Most of the work that is planned within the project will be based on data collected in recently completed or ongoing research projects.
